About me

Born on 19/11/1997 and currently based in Abbiategrasso, Italy, I'm a Software Developer with three years of experience focused on building modern web applications and intuitive user interfaces. My main expertise lies in React, where I design and develop reliable, scalable, and user-centric front-end solutions.

Alongside front-end development, I have hands-on experience with backend systems in .NET, Microfrontend architectures, and SharePoint integrations. I also work with Python and Kubernetes, applying these technologies to improve automation, scalability, and overall system robustness.

Driven by curiosity and a proactive mindset, I am constantly exploring new technologies, refining engineering practices, and expanding my technical skill set. I approach problem-solving with clarity and attention to detail, always aiming to deliver high-quality solutions while collaborating effectively within cross-functional teams.

Key achievements

- Developed scalable and high-performance React interfaces, creating reusable components and optimizing overall user experience.
- Contributed to backend development in .NET, implementing robust features and improving integration with front-end services.
- Designed and integrated Microfrontend architectures, enhancing modularity, maintainability, and team autonomy.
- Supported and optimized SharePoint-based platforms, streamlining internal workflows and improving system reliability.
- Improved automation and scalability using Python and Kubernetes, increasing system performance and resilience.
- Actively collaborated within cross-functional teams, contributing to both technical and product-oriented decisions.
- Maintained a proactive, quality-driven mindset, focused on continuous improvement and effective problem-solving.

Education

Start2Impact
Online

Junior Front-End Developer — *Jan. 2022 – Mar. 2022*

- HTML & CSS for creating responsive and accessible layouts.
- JavaScript (ES6+) for dynamic and interactive features.
- Development of modular interfaces using React.
- Implementation of practical projects: landing pages, websites, and small web apps.
- Enhanced problem-solving skills and attention to detail.
- Preparation for real-world work as a Junior Front-End Developer.

University of Milan
Milan, Italy

Bachelor's Degree in Music Informatics (not completed) — *Sep. 2017 – Withdrawn*

- Bachelor's degree program in music informatics.

Technical High School
Milan, Italy

High School Diploma — *Sep. 2011 – Aug. 2017*

- High school diploma with a focus on technological studies.

Skills

Spoken Languages	Italian (native), English (B1)
Programming Languages	Python, JavaScript, TypeScript, C#, HTML, CSS
Frameworks & Libraries	React, .NET, Microfrontend architectures, React Native, Electron
Tools & Platforms	Kubernetes, Docker, SharePoint, Git, CI/CD pipelines, Webpack, Jenkins, Bitbucket
Databases & Data Technologies	AWS S3, Elasticsearch, Opensearch
Soft Skills	Problem Solving, Teamwork, Communication, Adaptability, Proactivity, Continuous Learning

Experience

Capgemini – European Space Agency (ESA)

Milan, Italy

Software Engineer

Apr. 2023 – Present

- I'm involved in the Performance Monitoring System (PMS), a mixed solution combining commercial software and custom development for monitoring data in the space ecosystem. My main responsibilities include managing Grafana dashboards, storing data in OpenSearch, and handling secure data ingestion via the input basket.
- Developed and maintained Grafana dashboards to visualize key performance indicators, enabling team members to monitor data efficiently across multiple timeframes.
- Implemented data storage pipelines in OpenSearch to ensure fast and reliable access to raw and pre-calculated data, supporting the overall data flow of the PMS.
- Managed the secure input basket (SFTP) for ingesting external data from providers/services, ensuring data integrity and confidentiality.
- Participated in a knowledge transfer (KT) for an ETL project written in Python from French colleagues, which aggregates PMS data and computes key performance indicators (KPIs).
- Maintaining and enhancing the Invalidation Tool, a React-based frontend application used to correct KPIs in cases of issues not caused by our systems, creating new features to improve usability and reliability.
- Worked closely with the team to optimize ETL processes, maintain high data quality standards, and ensure accurate KPI reporting.
- Technologies: Python, OpenSearch, Grafana, React, Kubernetes.

Capgemini – Poste Italiane, Milan

Milan, Italy

Software Engineer

Apr. 2023 – Present

- Developed new web parts for SharePoint, managing the entire frontend to ensure an intuitive and responsive user interface.
- Collaborated with product and design teams to improve UI/UX and implement customer feedback.
- Technologies: React, TypeScript, SharePoint ESA.

Craon

Italy, Milan

Software Developer

May 2022 – Mar. 2023

- Developed front-end applications for the banking sector using a microfrontend architecture.
- Collaborated in cross-functional teams to deliver scalable and maintainable web solutions.
- Participated in DevOps pipelines and CI/CD integration to improve deployment efficiency.
- Technologies: React, JavaScript/TypeScript, Webpack, Jenkins, Bitbucket.
